

## DELPHION MAKES IT EASY TO SEARCH THE WORLD'S TOP DATABASES

With more than 40 million documents from the world's top patent collections, *Delphion*<sup>®</sup> ensures you get a global perspective. With *Delphion*, you can search against any or all of the following collections:

- United States (US) patents and applications
- European (EP) patents and applications
- World Intellectual Property Organization PCT publications (WO)
- German (DE) patents and applications
- Patent Abstracts from Japan (JP)
- INPADOC Legal Status

In addition to patent office collections, *Delphion* also offers access to *Derwent World Patents Index*<sup>®</sup> (*DWPI*<sup>SM</sup>), the most comprehensive database of enhanced patent information in the world.

When building your search, you can use *Delphion*'s Corporate Tree to help you more accurately find US, European and WO records by Assignee name. The Corporate Tree feature helps end the confusion caused by mergers and acquisitions

and the many different ways an Assignee's name can be represented on a patent document.

With *Delphion*, you can also access scientific journal abstracts from the *Web of Knowledge*<sup>SM</sup> defensive disclosures from IP.com, and industry technical standards and specifications from *Techstreet*<sup>®</sup>.

## EXPLORE PATENT DETAILS FROM THE DELPHION INTEGRATED VIEW

Exploring a patent document and related details has never been easier than with the *Delphion* Integrated View. The unique Integrated View is a valuable data source that allows you to quickly scan all of a patent's relevant information in one data-intensive document, drawing from a complete collection of patent resources, including *DWPI* and *Delphion* Corporate Tree hierarchy data.

The Integrated View features a direct link to the patent document's corresponding *DWPI* record—as well as a link to order a file history and a link to display Corporate Tree hierarchy data for the Assignees. The Family Legal Status report is accessed from the Integrated View and shows legal status information for all members of the patent family.

**File History Ordering**  
The Boolean text search enables you to search by words or phrases using up to four designated patent fields.

**Delphion Integrated View**  
The Delphion Integrated View gives you the most complete patent record available. Data from multiple sources come together in one easy-to-scan view.

### WHEN TO USE IT

- Determine freedom to operate within a particular technology area
- Identify the patentability, infringement, or validity of an innovation
- Gain competitive intelligence and monitor industry trends
- Uncover new markets and market opportunities
- Identify licensing opportunities
- Make "build vs. buy" decisions
- Research merger or acquisition candidates

### WHO USES IT

- Competitive/Market Intelligence
- Engineers
- Information Managers
- Intellectual Property Specialists
- Legal
- Licensing
- R&D
- Strategic Planning and Executives

## ORGANIZE YOUR WORK AND SAVE TIME

*Delphion* offers tools to help you both organize your work and avoid time-consuming, repetitious tasks.

A Saved Search lets you save your search query directly from the Result Set page. Once a search is saved, you can go back at any time and run it again instantly at the click of a button.

You can also use your Saved Search to setup an Alert to track your competitors, learn of new developments or monitor industry trends. Automatic email notifications are sent as new patents are added to global collections, or as frequently as you choose.

In addition, you can save your search results into a Work File. When creating Work Files, you can combine the results from multiple searches into a consolidated list, or import a list of patents from another application. Once created, a Work File can be shared with other individuals and annotated with comments and other file attachments.

## GET DOCUMENTS AND DATA THE WAY YOU NEED THEM

With *Delphion*, you can quickly view, download and print high-quality patent images one at a time or in bulk directly from a Result Set. PDF Express lets you download multiple PDF documents into one zip file, saving you time and effort.

You can also order File Histories as quickly and easily as you order any *Delphion* patent product. Order right from your Result Set, the *Delphion* order form or from the Integrated View. You can choose to download your file history or have it sent to you on CD-ROM or paper.

And with Data Extract, you can leverage patent data in entirely new ways—making your research more productive and your work more effective. Data Extract lets you extract over 50 bibliographic fields—including abstracts, first

claims, independent claims and the number of forward references—into spreadsheet, database or presentation applications—including *Thomson Data Analyzer*.

## ANALYZE RESULTS TO UNCOVER HIDDEN INSIGHTS

A search can give you lots of results. To help you make sense of it all, *Delphion* gives you a complete set of analysis and visualization tools.

Snapshot delivers easy-to-comprehend bar charts in an instant, directly from a Result Set or Work File. You can see who the top inventor in a field is, learn about your competitors' activities or reveal trends for a given technology.

Citation Link reveals a patent's forward and backward citations in a visual map, using a tree diagram or timeline. With Citation Link you can instantly find out if an invention is key to an industry or see if competitors are following your lead.

Text Clustering is an exclusive *Delphion* tool that groups like patents together through intricate linguistic analysis of the patent title and abstract. Results can be visualized graphically with a map that provides an overview of the clusters and shows the relationship between them.

*"Innovation drives our work. We are launching many new products every year with new features. With *Delphion* and *DWPI on Delphion* from Thomson Scientific, we have the patent research tools we need to help us stay in front of innovation."*

— Alessandro Guerici  
European Patent Counsel  
Whirlpool Europe-Italy
